

EMC APPLICATIONXTENDER CAPTURE PACKAGE

Seamless integration options with different capture packages

ESSENTIALS

- Flexible configuration to meet the needs of any production environment
- Seamless integration with EMC ApplicationXtender
- Feature-rich and easy-to-use functionality for large-volume image acquisition and indexing
- Multiple capture packages available to suit company's imaging and scanning requirements

Organizations cannot afford to leave critical business information locked in paper documents, which are expensive to store and difficult to transport, search, share, or manage in a workflow. Employees need on-demand access to key documents so they can make solid business decisions and respond rapidly to customer requests. Documents that are located in filing cabinets, paper archives, and personal hard drives will serve the organization and its employees much better if they are stored electronically and managed in an enterprise repository.

High-volume batch scanning and indexing with EMC ApplicationXtender and EMC Captiva

EMC® ApplicationXtender seamlessly integrates with the full suite of EMC Captiva products to include EMC Captiva QuickScan Pro. The EMC Captiva capture package provides fast and efficient batch scanning capabilities for EMC ApplicationXtender. As a high-speed batch scan and index module with configurable processing queues, EMC Captiva for EMC ApplicationXtender seamlessly integrates with the EMC ApplicationXtender Desktop to create a complete, high-volume document capture solution that is easy to install, configure, and operate.

Kofax Ascent Capture

Kofax Ascent Capture package delivers document capture, data capture, and web-based capture as part of a single low-cost application option. These key features that are part of the package are easily customizable for the most complex, high-volume capture jobs. In document capture, scanned images are stored for later retrieval, so the focus is on efficient scanning, accurate image cleanup, and automated indexing. In data capture, images are frequently discarded and only the extracted data kept, so the focus is on versatile and accurate recognition features (bar-code scanning, OCR for machine print, ICR for handwriting, and OMR for reading marks on forms). Web-based capture from remote locations can quickly transmit data directly to the central site in real time and then stored in EMC ApplicationXtender for immediate access.

eCopy ShareScan

With the eCopy ShareScan OP Connector for EMC ApplicationXtender, hard copy documents are quickly converted into digital files to be stored in folders within the EMC ApplicationXtender repository. Document indexing information (such as type, last name associated with document, date, and so on) is added by the end user at the

REDEFINE

DATA SHEET

EMC²

digital copier, desktop scanner, or multi-function printer (MFP) devices using eCopy ShareScan OP. This indexing information enables the document to be sent directly to the specified location for storage within EMC ApplicationXtender.

Full-featured batch scan and index

With EMC ApplicationXtender, users can simultaneously perform work on the same batch from multiple workstations—including any combination of scan and index workstations. EMC ApplicationXtender capture packages features the following:

- Auto-index
- Key reference file
- Duplicate previous index features

Other advanced features include the following:

- Auto page rotation
- Thumbnail display
- Blank page separation
- Minimum page size discard (blank page deletion)
- Automatic index increment
- Index character carry-over

EMC ApplicationXtender Capture Package incorporates an index locator feature that allows users to zoom in on regions of a document to accelerate the creation and population of index fields.

EMC ApplicationXtender Capture Package also leverages the batch indexing feature of ApplicationXtender and offers a complete set of batch scan and index functions—including input, index, and output processing that scans (imports), indexes, and releases documents to any EMC ApplicationXtender database. EMC ApplicationXtender Capture Package is an affordable and effective solution for users not requiring advanced image processing, bar code recognition, or zonal OCR indexing features.

Instant document management solution that drives business results

Designed to meet the budget and functional requirements of enterprise departments and midsize organizations, EMC ApplicationXtender is an instant document management solution that reduces costs by streamlining the capture and management of documents – helping you to minimize the challenges associated with managing paper.

EMC ApplicationXtender leverages your existing IT infrastructure to electronically store, organize, and manage virtually any kind of business content. Easy to implement, integrate, and manage—providing instant, role-based access to content from either a desktop interface or web browser and provides many out-of-the-box features that make it simple to create, modify, and implement business solutions without IT support.
